SUMMARY

Backend engineer with 2+ years building production lending systems in Node.js/TypeScript and Java/Spring WebFlux on PostgreSQL, Redis and AWS. Experience spans multi-tenant origination services, fault-tolerant integrations across 15+ third-party financial providers, and AI-assisted document and triage workflows built with evaluation, PII controls and fallbacks.

EXPERIENCE

Associate Software Engineer

Lentra.AI — lending technology platform

Pune, India

Nov 2024 – Present

- Developed reactive backend services for the Loanways lending platform in Java, Spring Boot and Spring WebFlux with PostgreSQL and Redis, using non-blocking I/O and caching to sustain high-throughput API traffic.
- Built the core origination service for an AI-assisted MSME lending journey, with multi-tenant configuration and cluster-aware Redis caching on a TypeScript/Express and PostgreSQL stack.
- Automated applicant verification end to end, chaining OCR/LLM document extraction, bank-statement and ITR analysis, GST and credit-bureau pulls, and document KYC into one onboarding flow.
- Made the integration layer fault-tolerant across 15+ third-party financial providers using retry policies, circuit breaking and mock modes, so a vendor outage degrades gracefully instead of stalling live applications.
- Migrated the scheduler integration of an RBI-compliant Video KYC (V-CIP) platform from blocking to reactive on Spring WebFlux, reworking officer allocation, slot booking and automated call-recording upload over reactive MongoDB, Redis and Kafka, and tuning MongoDB driver connection pooling to hold the service stable under load.
- Built an AI-driven ticket triage system in Python on AWS Comprehend, Bedrock and Lambda, replacing manual classification with an LLM workflow performing PII redaction, summarisation and priority-based routing.
- Built a push-notification service on Firebase Cloud Messaging with topic-based broadcasting, exponential-backoff retries, Vault-managed credentials and S3 document-upload APIs.
- Cut Docker image size 87% and build time from 15 minutes to under 3 by restructuring the Video KYC pipeline around multi-stage builds and shared pre-built base images, shipping a slim JRE runtime in place of the full build toolchain; migrated deployments to Jenkins and GitLab CI/CD on Kubernetes.
- Delivered a Node-RED integration platform for a consumer-durable financing journey, authoring reusable custom nodes (OTP, KYC, selfie verification, agreements, disbursal) deployed as a Docker Swarm stack.

Machine Learning Intern

Bluorigin

Pune, India

Feb 2024 – Jun 2024

- Built a customer segmentation and recommendation system with K-Means clustering, selecting cluster count via Elbow and Silhouette analysis.
- Translated cluster output into actionable customer personas, visualised as radar-chart segment profiles.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL

Backend: Node.js, Express, Spring Boot, Spring WebFlux, REST APIs, Microservices, Reactive Programming, Kafka, Node-RED

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS (Lambda, S3, Comprehend, Bedrock), Docker, Kubernetes, Jenkins, GitLab CI/CD, Git, HashiCorp Vault

EDUCATION

B.Tech, Computer Science

MIT World Peace University — GPA 8.37/10.0

Pune, India

Jul 2020 – Jul 2024

PUBLICATIONS

“Breast Cancer Detection using Computer Vision” — J. Tingre, V. Mundada, A. Choudhary, H. Shelke. IRJET, Vol. 11, Issue 2, Feb 2024.
